AI for Good - Term 2 Project
Team Contract

1. Team Members

1. Rayna Jong
2. Ana Talg Wolf
3. Joel Navarro Munté
4.
5.

2. Provisional Customer

University students who have completed psychological treatment ("graduated" from a psychologist) but still need occasional emotional support. The project could also serve students who are struggling with their mental health, are on long waiting lists for university psychological services, or are considering seeking professional help for the first time.

3. Customer/User/Beneficiary Specification

Customer/User/Beneficiary	Need/Want
University students who have completed psychological treatment	Ongoing emotional support and a tool to help them cope with difficult days and maintain their mental well-being.
University students waiting for an appointment with a psychologist	Accessible and immediate emotional support while waiting for professional help.
Students who are considering starting psychological treatment	A safe, approachable way to explore their feelings, understand their struggles, and feel encouraged to seek professional help.
University psychological services	A potential complementary tool that could support students between appointments and help reduce pressure on overbooked psychologists.

4. Why This Context Interests the Team

Mental health is an important issue among university students, who often experience stress, anxiety, loneliness, and academic pressure. University psychological services are frequently overbooked, meaning students may have to wait months before receiving professional support.

Furthermore, students who have completed psychological treatment may still experience difficult periods and could benefit from continued, accessible support.

Our team is interested in exploring how AI can be used for good by providing an approachable and supportive tool that helps students manage their mental well-being.

We believe that an AI-powered mental health companion could complement traditional psychological care, encourage self-reflection, and help students feel less alone during difficult moments.

5. Possible Opportunities / Issues (2-3)

Opportunity/Issue 1: **Accessibility of mental health support**

University students often face long waiting times to access psychological services. An AI-powered companion could provide immediate, accessible emotional support whenever students need it, especially during periods when professional help is not readily available.

Opportunity/Issue 2: **Continuity of care after psychological treatment**

Students who have completed therapy may still experience emotional difficulties. An AI companion could help them maintain the progress they have made, practice coping strategies learned during therapy, and navigate challenging days.

Opportunity/Issue 3: **Safety, trust, and ethical considerations**

Mental health is a sensitive topic, and AI cannot replace a qualified psychologist. The tool must be designed to avoid harmful advice, protect users' privacy, recognize situations where professional help is needed, and provide appropriate guidance in crisis situations.

6. Open Questions

What do you not know about your project that you would want to investigate next

Would university students feel comfortable sharing their emotional struggles with an AI companion?
What features would make the tool genuinely useful for students who have completed psychological treatment?
How can the AI provide emotional support without replacing professional psychological care?
How can we ensure user privacy and the safe handling of sensitive mental health information?
Could this tool help reduce the pressure on university psychological services?
How should the AI respond when a user is experiencing a serious mental health crisis?
What would make students trust and regularly use this tool?

7. Team Rules for Collaboration

Communication: Keep each other updated on progress and respond to messages within a reasonable time.

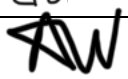

Deadlines: Let the team know in advance if you cannot finish a task on time.
Helping each other: If you are struggling with a task or need extra help, ask the team early instead of waiting until the last minute.
Meetings: Try to meet in person at least once a week, either at school or somewhere else. If meeting in person is not possible, we can meet online.
Flexibility: We can work together after school when everyone is available, or individually/online when our schedules don't match.
Attendance: Inform the team as early as possible if you cannot attend a meeting or will be late.
Fair contribution: Divide tasks fairly, respect each other's opinions, and take responsibility for your own work.
Problems: If there are disagreements or issues, discuss them openly as a team and try to find a solution together.

Team Agreement

We agree to contribute respectfully, communicate openly, and support one another in achieving the project goals.
