DEMO GYMTRACK

The problem

Beginners often train, but do not consistently remember or reflect on their progress.

After one day, workout details are easy to forget.

This makes it harder to see patterns, celebrate progress, or avoid doing too much.

Lost details

Sets, reps, cardio, steps and effort can be forgotten.

No weekly view

It is difficult to notice what was completed this week.

No quick support

Beginners may need simple encouragement after training.

OUR RESPONSE: SIMPLE WORKOUT LOGGING +
SUPPORT

Who GymTrack is for

A focused SDG 3 tool for people beginning their gym routine.

New gym-goers

People who want an easy way to record what they did today and look back at their weekly progress.

CONDITIONS OF USE

- Uses Telegram chat
- Can type a short workout message
- Wants general tracking feedback

SDG 3

Good Health and Well-being

GymTrack supports healthy routines by helping users reflect on activity, build consistency, and receive reminders not to overwork.

LOW-PRESSURE •
BEGINNER-FRIENDLY

How it works

One short chat message becomes a saved workout record and a supportive reply.

Example input: “Today I did 20 minutes cardio, squats 3×10, and 6,000 steps.”

The workflow replies in the same chat—no manual work is needed.

A simple chat experience

The user does not need a complex dashboard—just sends their workout in Telegram.

It recognises the workout

The reply mentions what the user wrote.

It encourages safely

The response supports motivation and rest.

It records progress

The workout can be used for weekly reflection.

The n8n workflow

n8n is the required tool and connects the complete experience.

LIVE AUTOMATION

We used n8n to connect Telegram, workout history, ChatGPT feedback, and saved records in one automated workflow.

Responsible use

GymTrack supports tracking; it does not replace a human trainer or medical professional.

Risk

A user may overtrain or follow feedback despite pain or a health condition.

Effect

This can increase the risk of injury or give false confidence.

Our action

We show warnings: do not overwork, stop if there is pain, and seek professional advice when needed.

Clear boundary: General workout tracking and encouragement only — not medical, nutritional, or personalised training advice.

Log. Learn. Improve.

GymTrack helps new gym-goers turn a short workout chat into a remembered routine and supportive feedback.
